

Title

Name Firstauthor  ^{*} ¹, **Name Secondauthor**  ², **Name Thirdauthor**  ^{1,3}

¹Department of Earth Sciences, A University, City, Country, ²School of Earth Sciences, Another University, City, Country,

³Center for Studying Cool Things, University of X, City, Country

Author Contribution Statements

Geomorphica mandates that all authors take public responsibility for their submitted works. The contributions of all authors must be described in this section using the Contributor Roles Taxonomy (CRediT) (<https://casrai.org/credit>). It is not mandatory to use all 14 roles. An author's name must appear at least once and it may appear multiple times. For instance, "N.F. and N.S. conceptualized the research. N.S. and N.T. conducted field surveys. N.F. and N.T. handled XYZ analysis, etc." All authors have endorsed the manuscript's final version for publication. For single authors, use the statement: "Author A.B. confirms sole responsibility for the study's conception, design, data collection and analysis, interpretation of results, and manuscript preparation." Contributors who do not meet the authorship requirements should be listed in the Acknowledgments section.

Acknowledgments

This is a place to express gratitude towards all individuals and/or entities that contributed to the work's completion, but who are not recognized as co-authors. Examples of acknowledgments that could be included: (1) if specific permissions were obtained for the research (e.g., access to restricted areas, data, or materials), (2) if someone or some team provided data used in the study, (3) if someone or some team provided information helpful for analysis, and (4) if someone provided logistical or operational assistance with the work, well beyond an expected level of contribution. There are many additional ways in which an individual, team, or organization may have helped enable the work's completion. Some examples of acknowledgments are "We thank the <mission team> for collecting and making available the <datasets> used in this study," "We thank <person> for valuable discussions that

*Corresponding author: a.firstauthor@university.edu

guided our analysis,” “We appreciate the significant effort by <person> towards setting up our fieldwork permissions and planning, <why significant, e.g., enabling our avoidance of the rainy season>.” Do not include funding source information in this section.

Land Recognition

When the research was conducted on the (previous) land(s) of indigenous people, authors should include appropriate acknowledgments for the lands and the indigenous communities in this section. For further details about Geomorphica’s Land Recognition requirements and examples, please see our Land Recognition Guidelines (<https://journals.psu.edu/geomorphica/landrecognition>). If none of the research work was conducted on the (previous) land(s) of indigenous people, authors should state it. For example: “After consulting relevant resources and checking with the relevant local communities, the authors have confirmed that the lands containing their institutions and all work sites associated with this study do not have cultural or historical significance to a particular indigenous group.”

Data and Code Availability

Authors must guide readers to an open-access permanent repository where the study’s data and code are accessible, either as supplementary materials available online with the main article on our website, or uploaded to FAIR data repositories, such as Zenodo, Figshare, or Dryad. Include citations (such as DOIs) for datasets and codes in the references. Statements such as “data and codes will be available upon request to authors” are NOT acceptable for publication in Geomorphica. For further details about Geomorphica’s data and code availability requirements, please see our Data and Code Availability Guidelines (<https://journals.psu.edu/geomorphica/DataCode>).

Funding Statement

Geomorphica requires authors to specify any funding sources (institutional, private, or corporate) supporting the reported work. This information should list the funding organization(s) and grant number(s) (if applicable), and it should be provided upon submission. If no funding was received, authors should state: “This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.”

Conflict of Interest Disclosure

Declare any competing interests, financial or otherwise, pertaining to any of the authors. If there are none, state that the authors have no competing interests.

Permission to Reproduce Material from Copyrighted Sources

If this manuscript reproduces content (texts, figures, videos, codes, or other materials) from copyrighted sources, detail the obtained permission(s) here. If none, simply state: "The authors declare that no material from copyrighted sources was reproduced in this manuscript."

Declaration on Artificial Intelligence Use

Please declare here all use of AI in the creation and revision of the methods, results, images and text. If none, simply state: "The authors declare that no artificial intelligence tool was used to assist in or generate any part of the contents in this manuscript."

In order to ensure scientific integrity, the submission and publication of content, results and images generated by Artificial Intelligence (AI), language models, machine learning, or similar technologies is not allowed, unless it is part of the research methods, in which case, authors must provide detailed information, including a description of the content that was created, the name of the model or tool and version number, in the Materials and Methods section or in a relevant section of the manuscript.

Authors may use large language models (LLM) to assist with writing style, grammar, and language. While we recognize that editing assistance (where AI is used to suggest edits of a text that has been provided by the authors) might be helpful if properly supervised and declared, we do not accept the use of content assistance, where a new text is generated by AI tools. In any case, specific details on the use of AI assistance as well as the name of the language model or tool need to be disclosed in the declaration of AI use.

All authors are fully responsible for any submitted material that includes AI-assisted technologies, which cannot distinguish between true and false information and require supervision. Authors should carefully review and edit the results of all AI-assisted content. Researchers should also be aware that when using AI tools, text provided as input is generally offered without copyright protection for others to use freely; likewise, any generated text they use may breach copyright."
